

Experience in 3D CAD (computer aided design) design lead us through different fields of mechanical engineering. Understanding of mechanical problems is backed up with more than 5 years of experience in mechanical industry and with capability of drawing precise and simply understandable drawings we can create simple parts, smaller assemblies, those with more than 100 parts, welded elements, sheet metal, surface modeling, stress analysis, flow analysis and many more. If you have a problem and you need help with CAD design we have experience with using various CAD programs.
